EIG200

Product Introduction

The EIG200 gateway product developed by Optimax Tech is used for on-site industrial equipment networking services. The 4G network is used as the main bearer network to provide industrial users with wireless data transmission channels, which can easily complete remote data collection and control of on-site equipment. Create connected value for customer equipment.

Features

- Low cost
- Good scalability
- Support for mainstream IoT protocols
- 32-bit MCU
- Support for five-party voice call
- Support 4G network, 2-way RS485, 2-way RS422, and five-party call interface
- Compatible with elevator and escalator
